AutoCAD (left), and AutoCAD LT (right). In February 1992, Autodesk introduced AutoCAD LT, a less-expensive, simplified version of AutoCAD that worked on home computers, eliminating the need for a microcomputer, and with price points ranging from US\$100 to US\$350. In 1999, Autodesk discontinued AutoCAD LT, but AutoCAD continued to be available as a separate app. View of AutoCAD LT 2002 with the desktop shown in black. On July 1, 2006, Autodesk introduced a new web version of AutoCAD called AutoCAD LT Web. Autodesk Inc. (www.autodesk.com) is a San Francisco-based computer-aided

design software manufacturer founded in 1982 by Gary K. Hook in 1981. Autodesk's flagship product is AutoCAD, a Windows-based solid modeling software program used by architects, interior designers, engineers, and other professionals. The company also manufactures other popular software applications, including 3ds Max, Inventor, Maya, Maxon Cinema 4D, SketchBook Pro, and many others. Its acquisitions of 3D printing software company 123D (in 2013, digital painting software company Sculpteo (in 2015, and British 3D animation software company Sculpteo in 2017 have broadened Autodesk's lineup to include 3D design software and visual effects. Official Autodesk products as

of September 2019. AutoCAD and AutoCAD LT are available as a desktop app, mobile app, and a web app. AutoCAD LT Web is the web-based version of AutoCAD LT, and is not directly compatible with the desktop version. It is limited to text-based drawing and editing and does not allow the 3D creation of models. The 3D Modeling and Rendering module, which allows the creation of 3D models, is only available in AutoCAD LT and the AutoCAD LT Advanced product. Since its inception, AutoCAD has been one of the most widely used CAD programs in the world. It is a key piece of software in the training of engineers and architects, and it is also used for the creation of products, such as machine

parts, architectural models, and so on. In 2011, Autodesk

What is occurring in this industry is too

many bloggers and too many marketers that are spending money to promote their blog and email campaigns and are failing. The statistics in this section deal with: How many blogs are being started each year? How many blogs are being started each week? How many blogs are being started each day? How many articles are being written each day? What is the % of posts that are being shared on facebook, twitter, & pinterest? How many people are using blogs to market their business? How many people are receiving an email blast from their blog? What does the growth rate of blogs need to be in order to be considered profitable? If we look at some of the statistics we find that the number of blogs being started each year

has been flat since 2009. According to Paul Glastonbury there are 73.82 million blogs today. This number was 74.3 million in 2010. It is 79.2 million in 2011, and 80.2 million in 2012. That is up 7.2% in only 1 year. The number of blogs being started each week has been steady since 2009. Paul Glastonbury says there are 7.7 million blogs being started each week. We have seen a decline from 2008 when there were 9 million blogs being started each week. This is down from 9.5 million in 2009 and 10 million in 2010. The latest statistics are that we are at 6.8 million. The number of blogs being started each day is also a flat trend from 2009. On average there are 62.7 million blogs being started each day, which is the

same number as in 2009. If this number can hold steady each day, this is a good news story.

What's New in the?

Improved workflow with improved readability of AutoCAD. A new “view” feature in the ribbon provides a variety of options for viewing drawings or drawing data. This view includes a new “slice” feature, where you can reveal how a 3D model is made, through slices that show layers and views.

Additionally, you can share model changes with others with the new “Show Model” dialog box. Add markup with new symbols in AutoCAD. Designers can add markup symbols, like arrows, lines, text and checkboxes, in the

drawing process, as they create. These symbols are made with a new double-click to create command. The double-click invokes a menu from which you can select from a large list of symbols and attributes. Drawing Exporter:

Export any of your drawings to a variety of file types. Quickly and easily generate PDF and XPS documents.

Easily convert your drawings to a web-based format. Easily convert DXF and DWG files to SketchUp or Rhino files for 3D modeling software. (video: 1:13 min.) Simplify dimension creation with new dimensions. You can easily assign the dimensions to a drawing layer with the new dimensions. Communication and collaboration with powerful new collaboration tools. Easily work with

others and share your designs and drawings. (video: 1:05 min.) 3D views and surface effects with the new Surface texture feature. You can automatically generate textures for your surfaces using a variety of materials from a new library. There is also a new mechanism for applying materials. Now you can apply effects to your surfaces as a group. 3D visualization with 2D imagery. Easily visualize your designs using 2D images. Convert these images to 3D without 3D modeling software. (video: 1:00 min.) Visualize larger areas with the new Areas tools. When you place an area, you can see the area in 2D and 3D. (video: 1:19 min.) Simplify model dimensioning with new dimension types. Quickly and easily

create dimensions that are convenient for your users. You can easily control the placement, size and appearance of dimensions. (video: 1:09 min.) Powerful analysis with new data management tools. New tools include table functions and a new advanced filters. (video: 1:16 min.) Powerful command-
