Programming languages AutoCAD is a product that is available as an Autodesk Software Development Kit (SDK) and as a component of the AutoCAD product. AutoCAD is primarily developed in an ObjectARX extension. ObjectARX is a powerful C++ class library that allows embedding of C++ objects and classes in the .NET programming model. This allows Autodesk to add new functionalities to the software, and add support for new technologies. AutoCAD is built using Visual Studio. Visual Studio allows development of code in many languages including C++ and .NET. Developers can use C#, C++, VB.NET, J#, Visual LISP or other .NET languages to extend AutoCAD functionality. To complement the software, AutoCAD's DXF (Drawing Exchange Format) is used to import and export drawing data. In 2009, the 2D and 3D vector and raster graphics formats were released under the Autodesk Graphics File Format (AGFF) specification. Autodesk released AutoCAD version 2014 as the first product to fully support the AGFF. The following year, AutoCAD LT 2014 was released which is a .NET-based client that uses the AGFF specification. The .NET-based client allows third-party applications to access the information in drawings. Developers can use the API to write Autodesk plugins that can add their own functionality to the .NET application. Programming support languages AutoLISP AutoLISP is a procedural programming language developed by Autodesk, which supports Autodesk engineering, architecture, and construction applications. Visual LISP Visual LISP was developed by Autodesk. Visual LISP's graphical user interface is based on Microsoft's Visual Basic and is available in three editions: the Classic, Express, and Professional. VBA VBA (Visual Basic for Applications) is an application programming language and development environment for Windows compatible MS Office applications. VBA was designed to be easy to learn and provides a quick path to programming. .NET AutoCAD 2014, released in 2009, uses .NET technology for the client application and the server extension. This makes the software compatible with all current Windows platforms. Support for the AutoCAD API is through .NET 3.5.1 or higher, and the following supported platforms and editions: Windows ca3bfb1094
