Unlike standard CAD programs, AutoCAD is multi-platform. As a desktop CAD app, it can run on Windows, Mac, Linux, and Solaris, and on all major consumer-grade and embedded computers and embedded systems with internal graphics controllers (except Apple computers). In addition, AutoCAD software is available for the Android mobile operating system, as an HTML5 web app, and as a CAD viewer for the Android tablet. AutoCAD users also have the option to use AutoCAD on tablets and smartphones through the use of a PC connected to the smartphone through a USB cable. AutoCAD is also widely used in the architectural and engineering design and construction industries, used in the building and construction, design and construction, manufacturing, engineering and construction. Several previous versions of AutoCAD were available, including AutoCAD 2, AutoCAD 2D, AutoCAD 3, AutoCAD 3D, AutoCAD 4, AutoCAD 2010, AutoCAD 2011, AutoCAD LT, AutoCAD 2013, AutoCAD 2014, AutoCAD LT 2014, AutoCAD LT for Mac, AutoCAD WS, and AutoCAD WS2016. This article provides an overview of the main

features of the application. For an overview of all of the available AutoCAD features, see AutoCAD Guide. What's New in AutoCAD 2020? AutoCAD 2020 is a major upgrade to the current release of AutoCAD. AutoCAD 2020 was announced on August 7, 2019. AutoCAD 2020 is available for Microsoft Windows, Mac, Linux, and Android. The main changes in AutoCAD 2020 include: AutoCAD 2020 is available for download free of charge. (Note that the free version of AutoCAD is limited in its capabilities and only available for single-user use.) Unlimited User License is no longer available. Starting from AutoCAD 2020, users are required to have a subscription for any AutoCAD users, including one-time licenses. New iPad and iPhone apps are available as web apps and add-on cards for the iPhone. AutoCAD WS (Web Services) is no longer available. 3D files are now natively supported. Blended views, layers, and symbols are no longer available in AutoCAD 2020. Edit mode is now available in

AutoLISP AutoLISP is a procedural programming language based on LISP. AutoLISP was developed by

---

Autodesk and later acquired by Corel. The idea behind AutoLISP was that it allowed AutoCAD users to produce their own custom solutions for AutoCAD. Visual LISP Visual LISP (VLP) was developed by Autodesk and later Corel. VLP is part of the C++ class library ObjectARX. The idea behind VLP was to create visual programming tools for AutoCAD. VBA Visual Basic for Applications (VBA) is a scripting language for Microsoft Windows developed by Microsoft. AutoCAD is one of the first applications to make extensive use of VBA. The idea behind VBA was to create a programming language for Microsoft Excel. Visual LISP Visual LISP (VLP) was developed by Autodesk and later Corel. VLP is part of the C++ class library ObjectARX. The idea behind VLP was to create visual programming tools for AutoCAD.

Integrations AutoCAD supports integration with other CAD systems through the DWG format (more commonly known as the Drawing Exchange Format), as well as via the VBA programming language. Autodesk Exchange Apps (AutoCAD Extension Apps) Macro Macros are written in AutoLISP or Visual LISP. They perform tasks such as inserting components, generating text, or texturing them. AutoLISP macros are organized in libraries or modules. When the macro is executed, all

---

macros from the library are loaded and executed one after the other. Each macro consists of a series of commands. The individual commands (but not the series of commands) can be configured to be "active" or "inactive". For example, the command can be designed to be active only for a specific layer, and inactive for all other layers. In that case, only the specific layer is processed. When a macro is triggered, the command for the macro can retrieve the name of the macro. The macro can then retrieve the command and parameter values. The parameter value can also be retrieved. Visual LISP macros can be created by opening the Interface Builder, which is a design tool included in AutoCAD. A command can then be created. Alternatively, Visual LISP ca3bfb1094

If you have problems activating Autodesk Autocad, see this FAQ. How to use the key Open the engine.ini file in your Notepad. Modify "EngineName" to match the name of your Autodesk product. In the "EngineVersion" field, add the version of Autodesk Autocad you want to use. In the "EngineHotfix" field, add the hotfix number for Autodesk Autocad. Save the file to your desktop. Drag the engine.ini file to the %AppData% directory. Q: Making SQLite foreign key possible and actual I'm creating a database with a table "leads" and this table uses the IDs of the "contacts" table. So, it looks like this: Now, I'm trying to create a function to insert a new lead into the table using the IDs from the contacts table, but everytime I try it, it doesn't work. I think I need to make the column for the IDs FOREIGN KEYS, but the problem is that even if I try to make them, it keeps saying that the columns are already in use. What am I doing wrong? Here is my CREATE TABLE code: CREATE TABLE IF NOT EXISTS `leads` ( `id` INTEGER NOT NULL PRIMARY KEY AUTOINCREMENT, `user\_id` INTEGER NOT NULL, `first\_name` TEXT NOT NULL, `last\_name` TEXT NOT

NULL, `title` TEXT, `phone` TEXT, `city` TEXT, `state` TEXT, `zip` TEXT, `email` TEXT, `description` TEXT, `notes` TEXT, `lead\_type` TEXT, `country` TEXT, `updated\_date` DATE NOT NULL, FOREIGN KEY (user\_id) REFERENCES contacts(id) ON DELETE CASCADE ON UPDATE CASCADE ); A: I believe you need to make contacts.id the PK in leads.user\_id. This way, leads.user\_id would be null for new rows, and they would match up when the data is loaded. Q: v

### **What's New In AutoCAD?**

The markup engine is the most powerful technology behind AutoCAD. It handles two major tasks—marking up and importing. Markup Import and Markup Assist can be used together, but you can also use the new Markup Import feature independently to import a design to AutoCAD and make changes automatically. When you use Markup Import, you can add feedback to a drawing that is already created in a specified location. To add feedback, just import the marked-up drawing. The new Markup Import feature is not limited to static drawings. It can also import designs that have interactivity, including animations, applications and the like. The new Markup

---

Assist feature enables you to mark up a drawing and import it directly to the current drawing. Now, you can directly enter markup from a browser, such as Google Drive, and add your feedback or changes directly to the current drawing. The markups that you enter are placed on the current drawing. This is useful if you are working on multiple projects or in multiple locations and want to enter your changes immediately. In addition to markup, the new Import Filters feature allows you to apply specific filter options to your imported data. This means you can filter for specific geometry, text, line styles, and so on.

**Automatic Graphical Editing:** Automatic graphical editing (AGE) is a new way for you to interact with your drawing. AutoCAD will propose possible geometric changes based on your inputs. You can use these suggestions directly or ignore them if you want, but the suggestions will be kept track of for future use.

**AutoCAD 2020 brought many significant enhancements to the graphically enabled features in AutoCAD. It is now possible to quickly edit and manipulate geometric shapes, align and snap objects, and more.**

**Toggle With Shortcuts:** The new Toggle With Shortcuts feature enables you to create custom keyboard shortcuts for commands. For example, you can create a shortcut to

---

toggle between Undo, Redo, and the Command window, which allows you to easily switch between different commands and views. You can also choose to bring up a pop-up window for the command or view for which you want to create a shortcut. The new Toggle With Shortcuts feature also provides a shortcut for the Delete, Copy, and Paste command. For example, you can create
