Field of the Invention The present invention relates to a document conveyance method for a transporting mechanism, and more particularly, to a document conveyance method for a transporting mechanism that transports a document such as a sheet of paper in a copying machine or the like. 2. Description of the Related Art As shown in FIG. 7, an image forming apparatus such as a copying machine is provided with a paper feeding portion 101, an image forming portion 102, a fixing portion 103, and a paper discharging portion 104. A document is inserted into the paper feeding portion 101, and the document is conveyed by a transporting mechanism not shown in the figure. The document is transported to the image forming portion 102, an image is formed on a document, and the image formed document is transported to the fixing portion 103. A fixing process is performed by the fixing portion 103, and thereafter, the document is discharged to the paper discharging portion 104. In a conventional copying machine, if an image forming operation is performed on a document that is larger than a document region that can be inserted into the image forming portion 102, the document is pinched by a belt, transported to a different portion, and then the conveyed
